Requirements for redundant fastening

The definition of redundant fastening according to Member States is given in the EAD 330747 § 1.2.1. In Absence of a definition by a Member State the following default values may be taken.

| Minimum number of fixing points | Minimum number of anchors per fixing point | Maximum design load of action N_{Sd} per fixing point ^{a)} |
|---------------------------------|--|---|
| 3 | 1 | 2 kN |
| 4 | 1 | 3 kN |

a) The value for maximum design load of actions per fastening point N_{Sd} is valid in general that means all fastening points are considered in the design of the redundant structural system. The value N_{Sd} may be increased if the failure of one (=most unfavourable) fixing point is taken into account in the design (serviceability and ultimate limit state) of the structural system e.g. suspended ceiling.
